

## EU-JAPAN forum on research and innovation communication in support of disaster societal resilience and risk governance (2025/03/03)

**Location** : Kyoto University Uji Campus, Kyoto, Japan

**Participant** : Muhammad Rizki Purnama (Ph.D. Student)

On the March 3 to 4, 2025, Ph.D. student from Tsunami Engineering Laboratory, Muhammad Rizki Purnama, attended the EU-JAPAN forum on research and innovation communication in support of disaster societal resilience and risk governance held by Disaster Prevention Research Institute (DPRI) at Kyoto University Uji Campus, Kyoto, Japan. On March 4, 2025, I presented my research at the poster session. The session provided an opportunity to discuss my findings with experts from both EU and Japanese institutions.

Throughout the event, I actively engaged in panel discussions with various EU and Japanese experts, particularly regarding HORIZON Europe Projects. The discussion panels covering topics such as public communication in disaster resilience, recent research advancements in DRR, and the importance of networking efforts to further support the Sendai DRR Framework. All of these sessions provided valuable insights into current international efforts in disaster risk governance and research collaboration, particularly between European and Japanese Institutes/University.

Poster session and panel discussion
